Free SoftEcho for Asterisk Echo Cancellation Software with Sangoma A200 and A400 Cards

The Octasic Software Echo Canceller (OCTVQE) can be used with your new Sangoma A200 or A400 card. You can register up to six channels with each A200 or A400 card.

Preparation:
Ensure that you have installed A200 or A400 card and Wanpipe driver on your Linux system:

For Wanpipe Driver installation please visit http://wiki.sangoma.com/.

OCTVQE:
ftp://ftp.octware.net/pub/register/
ftp://ftp.octware.net/pub/octvqe8

Visit the above ftp web server and download 'tgz' packages to one temporary directory. You need to download total two 'tgz' files:

1) octvqe8-xxx-pr-base.tgz
2) octvqe8-xxx-pr-intelxx.tgz OR octvqe8-xxxpr-amdxx.tgz
3) registerXX (For Registration)

Untar octvqe8-xxx-pr-base.tgz and carefully read the octvqeug5000-xxx.pdf/README. It contains detailed instructions to install and activate the Octasic software echo canceller (OCTVQE8).

Activation and Registration:
Please ensure that Wanpipe service is started prior to registration (wanrouter start).

When running. /registerXX, the following messages will appear:

```
This host contains a Sangoma A200/A400 board that is bundled with
OctWare's echo canceller.  Your are allowed to register this board with
OctWare's on-line license server and enable 6 channels of echo
cancellation to be used with Zaptel.

Would you like to register your A200/A400 now (y/n)?
```

Answer "y" will proceed with downloading OCTVQE8 license.
