

Initial configuration

Vega 100 E1 (H.323)

Gatekeeper mode – R5.1

This document describes how to configure the Vega 100 E1 H.323 unit using the web browser interface. The configuration described will allow the Vega to be rapidly installed and tested.

The instructions below will configure the Vega 100 to be a transparent trunking gateway allowing a gatekeeper to deliver calls to, and receive calls from both a PBX and the PSTN.

- Calls made from the PBX or PSTN to the Vega will be forwarded using the gatekeeper. The telephone number passed to the Vega will be forwarded unchanged to the gatekeeper.
- Calls made from the gatekeeper to the Vega will be forwarded to the PSTN or to the PBX based on the leading two digits of the telephone number passed. A leading 01 will cause the call to be routed to the PSTN, and a leading 02 will cause the call to be routed to the PBX. The digits following the 01 or 02 will be passed as the dialed digits.

The configuration process is broken down into 11 stages as follows:

- 1 Connect your Vega to LAN, Telephone and Power
- 2 Configure the basic LAN parameters
- 3 Configure password and login timeout
- 4 Check and configure LAN settings and Host name
- 5 Select Gatekeeper mode
- 6 Configure the Dial Plan
- 7 Configure audio parameters
- 8 Configure DSLs
- 9 Configure pointer to CD ROM documentation
- 10 Save Changes
- 11 Archive Vega Configuration

Please also see:

- 12 Technical Support
- 13 Advanced configuration

1. Connect your Vega to LAN, Telephone and Power

Before installing your Vega, ensure that you read the VegaStream VoIP Gateways Safety and Compliance Information document.

LAN:

Using the yellow booted cable connect the LAN port on the Vega [5] to a standard or fast Ethernet hub or switch (10 baseT or 100 baseTx). The connector nearest the ferrite core should be plugged into the Vega.

Telephony:

Connection to a PBX

- If you are connecting the Vega 100 to a PBX, the Vega 100 acts as the NeTwork equipment and a red-booted cable must be used.

For each trunk that is to be connected to the PBX, insert one end of a red booted cable into one of the Vega 100 DSL sockets [DSL 1 or DSL 2] and the other end to the PBX.

Connection to the PSTN

- If you are connecting the Vega 100 directly to the public telephone network it acts as the Terminal Equipment and the blue-booted cable must be used.

For each trunk that is to be connected to the PSTN, insert one end of a blue booted cable to one of the Vega 100 DSL sockets [DSL1 or DSL2] and the other end to the PSTN terminating box.

Power:

Insert the power cable into the AC power inlet on the Vega and switch on. The power LED on the front panel will illuminate.

The LAN LEDs will also illuminate indicating 10 (baseT) or 100 (baseTx) connection, and the FDX LED will illuminate if Full Duplex mode has been negotiated.

2. Configure the basic LAN parameters

If a DHCP server is available, by default, the Vega will automatically pick up an IP address. If you know the IP address served to the Vega, skip this section and start at [3](#).

If DHCP is not to be used to provide the Vega with an IP address, or you need to check the IP address provided to the Vega, connect the serial interface of the Vega to a PC serial interface using a 9 way male to female straight through cable.

Configure a terminal emulator program (such as Microsoft's HyperTerminal) for:

- Speed = 115200 baud
- Data bits = 8
- Parity = none
- Stop bits = 1
- Flow Control = none

Press <Enter> to get the Username: prompt

At the prompts enter the default user name and password

Username: admin

Password: admin

To display the current IP address, type:

➤ show lan.ip

If this is not the IP address required, it can be overridden, together with other LAN parameters by typing:

➤ set lan.use_dhcp=0
➤ set lan.ip=aaa.bbb.ccc.ddd
➤ set lan.subnet=eee.fff.ggg.hhh
➤ set lan.gateway=iii.jjj.kkk.lll
➤ save
➤ reboot system

3. Configure password and login timeout

Now configuration will be carried out via a web browser.

- Enter the IP address of the Vega into the “Address” field of your web browser.

You will then be presented with the login page:

Enter the default Username and Password

- Username: admin
- Password: admin
- Select

If this Vega is to be inter-working with another Vega leave the **H.323 LAN Configuration** alone, if it is to work with other manufacturer's devices, it is often best to untick the indicated items – as these are advanced H.323 features that are not always supported by other manufacturers. Once the Vega and the other device are working in the basic H.323 mode, try enabling other features – back towards this configuration, as this will improve call setup time.

➤ Scroll down to the bottom of the H.323 page

➤ Either configure the **H.323 Gatekeeper** “Default Gatekeeper” with the IP address of the Gatekeeper, or tick Auto Discover.

➤ select and then click “[here](#)” to return

Configure the gatekeeper Terminal alias – this needs to match the gatekeeper’s expectations.

e.g. set it to an H.323 type alias “Vega_100”.

In the **H.323 Gatekeeper Terminal Alias** section

➤ select [Modify](#)

[H.323](#) > [Terminal Alias 1](#)

Modify Terminal Alias	
Alias ID	1
Type	H323
Name	NULL
<input type="button" value="Submit"/>	

- Set Name = Vega_100
(hint: use _ instead of space as spaces are not allowed)
- select and then click "[here](#)" to return

H.323 Gatekeeper Terminal Alias				
Del?	Alias ID	Type	Name	Chg?
<input type="checkbox"/>	1	h323	Vega_100	Modify
<input type="button" value="Delete"/> <input type="button" value="Add"/>				

If more than one alias is required then select and configure as required.

6. Configure the Dial Plan

➤ On the left hand side menu select [Dial Plan](#)

The screenshot shows the Vega 100 T1E1 Online Configuration interface in Microsoft Internet Explorer. The left sidebar contains navigation links: Management, Logging, Maintenance, LAN, DSL, H.323, Dial Plan (selected), Media Channels, Tones, Users, QoS, and Advanced. The main content area is titled "Vega 100 Configuration". It displays host information (Host Name: Vega100T1E1, IP Address: 192.168.1.106, User Name: admin) and a warning about unsaved changes. The "Dial Planner" section is active, showing the "Profiles" table:

Del?	Profile ID	Enabled	Name	Plans	Chg?
<input type="checkbox"/>	1	1	Vega100T1E1_default	====>	Modify

Buttons for Delete and Add are present. Below this is the "Planner Groups" table:

Del?	ID	Name	Cause	Lan	Gatekeeper	Active times	Priority	Chg?
<input type="checkbox"/>	1	Default	0	off	off	0000-2359	0	Modify

Buttons for Delete and Add are present. Further down are sections for "Planner Whitelist Enable" (checkboxes for Use Whitelist and Submit) and "Planner Whitelists" (table):

Del?	ID	Name	Number	Chg?
<input type="checkbox"/>	1	default	IF:.*	Modify

Buttons for Delete and Add are present. On the far left of the main content area, there is a vertical sidebar with buttons for Save, Log off, Help, Reboot System, and Apply Changes.

Firstly, turn off the default profile:

In the **Profiles** section, Profile ID 1

➤ Select [Modify](#)

Dial Planner > Profile 1

Modify Profile	
Profile ID	1
Enabled	<input checked="" type="checkbox"/>
Name	Vega100T1E1_default
<input type="button" value="Submit"/>	

- disable (un-tick) Enabled, then
- select and then click “[here](#)” to return

Now create a new profile and in it create a dial plan entry to handle calls being sent from ISDN to the LAN:

Dial Planner

Profiles						
Del?	Profile ID	Enabled	Name	Plans	Chg?	
<input type="checkbox"/>	1	0	Vega100T1E1_default	==>	Modify	<input type="button" value="Delete"/>
	<input type="button" value="Add"/>					

In the **Profiles** section

- Select

Dial Planner

Profiles						
Del?	Profile ID	Enabled	Name	Plans	Chg?	
<input type="checkbox"/>	1	0	Vega100T1E1_default	==>	Modify	<input type="button" value="Delete"/>
<input type="checkbox"/>	2	1	new_profile	==>	Modify	<input type="button" value="Add"/>
	<input type="button" value="Delete"/>	<input type="button" value="Add"/>				

In the **Profiles** section, on Profile 2 (the new profile):

- Select [Modify](#)

Dial Planner > Profile 2

Modify Profile	
Profile ID	2
Enabled	<input checked="" type="checkbox"/>
Name	<input type="text" value="new_profile"/>
<input type="button" value="Submit"/>	

- Set Name = ISDN_To_LAN
- select and then click “[here](#)” to return

Dial Planner

Profiles						
Del?	Profile ID	Enabled	Name	Plans	Chg?	
<input type="checkbox"/>	1	0	Vega100T1E1_default	====>	Modify	
<input type="checkbox"/>	2	1	ISDN_To_LAN	====>	Modify	
Delete Add						

In the **Profiles** section, on Profile 2 (the ISDN_To_LAN profile):

- Select [Modify](#)

[Dial Planner](#) > [Profile 2](#)

Modify Profile

Profile ID	2
Enabled	<input checked="" type="checkbox"/>
Name	ISDN_To_LAN
Submit

[Internet](#)

Now create a new profile and in it create a dial plan entry to handle calls being received inbound from the LAN:

In a similar manner to adding profile 2 add another profile, profile 3,

➤ Set Name = LAN_to_ISDN_or_PBX

Modify the first plan for Profile 3:

➤ Set Name = From_LAN

➤ Set Source = IF:05,TEL:<..><.*>

(For calls from IF:05 (LAN), take the first two digits presented and store them in store <1>; take any further digits and store them in store <2>)

➤ Set Destination = IF:<1>,TEL:<2>

(The first two digits presented define the interface – 01 or 02 – and the remainder of the digits are passed on as the telephone number)

➤ select [Apply](#) and then click “[here](#)” to return

Note: *The gatekeeper must choose the appropriate interface on the Vega to dial out from; when the gatekeeper presents a call to the Vega, the telephone number field must contain either 01ttt...t or 02ttt...t, where ttt...t is the telephone number to dial.*

For more details on the operation of the dial planner, including the various tokens that may be used, see the section “The Dial Planner” in the Vega Primer.

7. Configure audio parameters

➤ On the left hand side menu select [Media Channels](#)

The screenshot shows the Vega 100 T1E1 Online Configuration interface in Microsoft Internet Explorer. The title bar reads "Vega 100 T1E1 Online Configuration - Microsoft Internet Explorer". The left sidebar contains a navigation menu with links: Management, Logging, Maintenance, LAN, DSL, H.323, Dial Plan, Media Channels (which is selected and highlighted in purple), Tones, Users, QoS, and Advanced. Below the menu are buttons for Save, Log off, Help, and Reboot System. The main content area is titled "Vega 100 Configuration" and displays host information: Host Name (Vega100T1E1), IP Address (192.168.1.106), and User Name (admin). A warning message "Unsaved Configuration Changes" is shown with a yellow exclamation mark icon. To the right of the host info is a decorative background image of three people in a professional setting. The "Media Channels" section is expanded, showing "Codec Configuration" with options like g729AnnexA, g729, g711Alaw64k, g711Ulaw64k, g7231, and T38. Below that is the "H.245 Capabilities" table:

Del?	H245 Cap ID	Name	Chg?
<input type="checkbox"/>	1	g7231	Modify
<input type="checkbox"/>	2	g711Alaw64k	Modify
<input type="checkbox"/>	3	g711Ulaw64k	Modify
<input type="checkbox"/>	4	t38tcp	Modify
<input type="checkbox"/>	5	t38udp	Modify

At the bottom of this table are "Delete" and "Add" buttons, with "Add" being circled in green. Below the capabilities table is the "H.245 Capability Descriptors" table:

Del?	ID	Description	Caps	Chg?
<input type="checkbox"/>	1	voice	1,2,3	Modify
<input type="checkbox"/>	2	t38Tcp	4	Modify
<input type="checkbox"/>	3	t38Udp	5	Modify

Add 2 more codecs so that by default the Vega will handle calls with any of the codecs it supports.

In H.245 Capabilities

➤ Select [Add](#)

<input type="checkbox"/>	3	t38Udp	7	Modify

H.245 Preferred Index	
Preferred Index	<input type="button" value="0 - no preference"/>
Voice Capdesc Index	<input type="button" value="0 - no preference"/> (circled in red)
Fax Capdesc Index	<input type="button" value="2 - t38Tcp"/>
<input type="button" value="Submit"/>	

- Set Voice Capdesc Index to 1

H.245 Preferred Index	
Preferred Index	<input type="button" value="0 - no preference"/>
Voice Capdesc Index	<input type="button" value="0 - no preference"/>
Fax Capdesc Index	<input type="button" value="0 - no preference"/> 1 - voice 2 - t38Tcp 3 - t38Udp
<input type="button" value="Submit"/>	

- select and then click "[here](#)" to return

This has selected all voice codecs to be offered for calls.

With Fax Capdesc Index set to “2 - t38Tcp” it has selected this codec for fax transfers. Note it is recommended that only a single T.38 codec is offered (as configured here), because if both are offered negotiations do not always complete correctly.

8. Configure DSLs

➤ On the left hand side menu select [DSL](#)

The screenshot shows the Vega 100 T1E1 Online Configuration interface in Microsoft Internet Explorer. The main title bar reads "Vega 100 T1E1 Online Configuration - Microsoft Internet Explorer". The left sidebar contains a navigation menu with links: Management, Logging, Maintenance, LAN, **DSL**, H.323, Dial Plan, Media Channels, Tones, Users, QoS, and Advanced. The "DSL" link is highlighted. The main content area has a header "Vega 100 Configuration" with fields for Host Name (Vega100T1E1), IP Address (192.168.1.106), and User Name (admin). A warning icon indicates "Unsaved & Unapplied Changes". Below this is a "DSL Configuration" section with dropdown menus for Network Type (set to ETSI, circled in green) and Network Topology (set to E1, circled in green). Other configuration options include Line Encoding (HDB3), Framing (CRC4), and Bus Master (set to 1). A "Submit" button is present. At the bottom is a "PORT Configuration" table:

PORT ID	Enabled	NT	Clock Master	Layer 1	E1 rx Short Haul	T1 tx equalization	ISDN	CAS	Groups	Chg?
1	1	0	0	g711Alaw64k	1	sh220_330	====>	====>	====>	Modify
2	1	1	1	g711Alaw64k	1	sh220_330	====>	====>	====>	Modify

Buttons for Save, Log off, Help, Reboot System, and Apply Changes are located at the bottom left.

➤ In the **DSL Configuration** section check that the Network Type = ETSI.
If required QSIG is an acceptable Network Type for E1 Vega 100s.

➤ In the **DSL Configuration** section check that the Network Topology = E1

➤ In the **DSL Configuration** section select the Framing Method as required:

DSL

DSL Configuration	
Network Type	ETSI
Network Topology	E1
Line Encoding	HDB3
Framing	CRC4
Bus Master	ESF SF CRC4 PCM30 AUTO
<input type="button" value="Submit"/>	

- CRC4 = CRC4 supported (usual ISDN configuration)
- PCM30 = no CRC4
- AUTO = CRC4

Note, ESF and SF are not supported on the E1 interface

➤ In the **DSL Configuration** section check that the Line Encoding = HDB3
(Note, the other available options: AMI and B8ZS are not supported on the E1 interface)

➤ select and then click "[here](#)" to return

For the configuration indicated in the initial diagram Port 1 = connection to the PSTN and Port 2 is a connection to a PBX, and so the Vega needs Port 1 configured as TE (and a blue booted cable used on it), and Port 2 configured as NT (and a red booted cable used on it).

Bus Master needs to be configured to point to an active TE trunk – to identify where the Vega will synchronise its internal clock from – in this configuration this should be 1 (DSL 1).

These are the default settings of the Vega and so no changes are required to the Network Terminator, Clock_Master, or Bus_Master settings.

In the **Port Configuration** section, for Port ID 1:

➤ Select [Modify](#)

Port 1

Port Configuration	
Port ID	1
Enabled	<input checked="" type="checkbox"/>
Network Terminator	<input type="checkbox"/>
Clock Master	<input type="checkbox"/>
Layer 1	g711Alaw64k
Set E1 RX short haul	<input checked="" type="checkbox"/>
T1 TX equalization	sh220_330

[Submit](#)

ISDN Configuration	
DTMF Termination Char	*
DTMF Dial Timeout	2
Setup Mapping	0
Cause Mapping	0

[Submit](#)

CAS Configuration	
ANI	<input type="checkbox"/>
Tone Delay	50

[Submit](#)

Groups									
Group ID	Interface ID	Cost Index	DN	First Channel	Last Channel	Alloc Channel	Tunnel Mode	Chg?	
1	01	1	*	1	30	default	off	Modify	
Delete	Add								

In the **Groups in this DSL** section, check that Last Channel = 30 or auto, if not change it to 30 or auto.

If any of the other Port parameters need changing, e.g. Network Terminator, alter them now.

Note: 1. if NT (Network Terminator) is ticked then typically Clock Master should also be ticked;
if NT is un-ticked (TE mode) then typically Clock Master should also be un-ticked.
2. if either trunk is TE then the Bus Master value (in the ISDN Configuration section)
should be set to point to the (one of the) TE trunk(s); 1 for Port 1 and 2 for Port 2.

If changes are made

➤ select [Submit](#) and then click "[here](#)" to return

➤ Repeat for the other Port (Port ID 2).

Table 1 can be used as a guide when setting up parameters for Vega 100 E1 ISDN installations.

Table 1. Network type, Line Encoding, and Topology

Product	Physical Connection	Network Topology	Network type	DSLs	Framing	Line Encoding	Calls
Vega 100-PRI-E1	E1-2.044 Mbps	E1	Euro ISDN	2	PCM30 / CRC4	HDB3	30 / 60
Vega 100-PRI-E1	E1-2.044 Mbps	E1	QSIG	2	PCM30 / CRC4	HDB3	30 / 60

9. Configure pointer to CD ROM documentation

- On the left hand side menu select [LAN](#)
- Scroll to the bottom of the screen

Advanced LAN Configuration

[Advanced LAN](#)

Done Internet

- Select [Advanced LAN](#)

To configure for operation using the CD in the local PC CD-ROM drive,

- Set Path or URL = D:/Content/help/v100e1h_R5.htm
- ... *N.B. use forward slashes “/” not back slashes “\”.*

(Substitute the appropriate drive letter if D: is not the CD-ROM)

- select **Submit** and then click “[here](#)” to return

10. Save Changes

The changes to the configuration must be saved and activated. This is carried out as follows:

- On the left hand side menu select [Save](#)

- Select [OK](#) and after the configuration has been saved click "[here](#)" to return

- On the left hand side menu select [Reboot System](#)

- Select [OK](#)

The Vega will reboot and once back on-line, it will be ready to take its first call.

11. Archive Vega Configuration

Once configured it is recommended that the configuration is archived to an external server.

To do this check that the tftp address is configured to point to a tftp server (in the [LAN](#) page), then on the left hand side menu select [Advanced](#), and scroll to the CLI Command section:

CLI Command

- in the text entry box type “PUT tftp:initial_cfg.txt”. Select

This will send all the configuration parameters to the tftp server and save them as the file “initial_cfg.txt”. (Note: you may want to choose a unique name rather than “initial_cfg.txt”, especially if you are configuring more than 1 unit).

The Vega configuration can be archived to an ftp server instead of a tftp server by configuring the ftp server address in the [LAN](#) page and then typing the CLI command “PUT FTP:initial_cfg.txt”. (Again a unique name can be used in place of “initial_cfg.txt”)

If the ftp server requires a login username and password configure the following:

- set _advanced.lan.ftp.anonymous_login=0
- set _advanced.lan.ftp.username=<ftp username>
- set _advanced.lan.ftp._password-<ftp password>

12. Technical Support

Support information can be found on the VegaStream Support web site www.VegaAssist.com

If you require help from VegaStream support personnel, please use the serial interface or telnet into the unit, log in and then type:

- show support
- log display on

Carry out the interaction you want explained, then copy the information provided by the Vega and e-mail it to support@VegaStream.com together with your question.

Notes:

1. If the screens do not appear as indicated, check that Java is enabled on your web browser (Tools>internet options>Security, select internet and custom level and configure Microsoft VM Java permissions and Scripting parameters as indicated below.

2. Where there are multiple sections – each with a **Submit** button – entries must be made to one section at a time, and those entries confirmed by the **Submit** button before the next section is altered. Each **Submit** button only confirms entries for its own section. Any changes in other sections will be discarded when the **Submit** is pressed.
3. H.323 supports two methods for transmitting call setup details. There is a standard method and then Fast Start. To allow the Vega to accept calls using the Fast Start technique ensure “Accept Fast Start” is enabled ... see section 1.5

For the Vega to initiate calls using Fast Start ensure that “Use Fast Start” is enabled ... see section 1.5.

13. Advanced configuration

E1 units have further configurable parameters that may be desirable to configure in order to fully integrate into the attached ISDN infrastructure.

13.1 Web browser configurable parameters

13.1.1 Line impedance matching

The Vega E1 receiver sensitivity can be configured based on the line attenuation between the Vega and the closest repeater or other ISDN endpoint.

The configuration is achieved using:

```
[_advanced.isdn]
e1_rx_short_haul=0 or 1      ; 0= long haul and
                                1 = short haul
```

or on the web browser interface, in the port configuration section off the DSL page:

Port Configuration	
Port ID	1
Enabled	<input checked="" type="checkbox"/>
Network Terminator	<input type="checkbox"/>
Clock Master	<input type="checkbox"/>
Layer 1	g711Alaw64k
Set E1 RX short haul	<input checked="" type="checkbox"/>
T1 TX equalization	sh220_330
<input type="button" value="Submit"/>	

Long haul should be selected when the cable between the Vega and the closest repeater or other ISDN endpoint introduces more than 6dB attenuation.

Short haul should be selected when the cable between the Vega and the closest repeater or other ISDN endpoint introduces less than or equal 6dB attenuation.

13.1.2 Channel Allocation Strategies

The Vega allows configuration of the channel allocation strategy to be used for each DSL on outgoing calls. Four options are available,

- i) *Linear_down* – where the Vega will use the highest available free channel to make the outbound call ... use this mode when the attached device is configured to make outbound calls using *Linear up*.
- ii) *Linear_up* – where the Vega will use the lowest available free channel to make the outbound call ... use this mode when the attached device is configured to make outbound calls using *Linear down*.
- iii) *Round_robin* – in this mode the Vega remembers the last allocated channel and then tries to use the next channel up from this for the next outbound call. (After reaching the highest channel ID it restarts at the lowest channel again.) ... use this mode when the attached device is configured to make outbound calls using *Round_robin* mode.
- iv) *Default* – if the DSL is configured as NT then the Vega will use the *Linear_up* scheme, and if the DSL is configured as TE then the Vega will use *Linear_down*.

By default the Vega has chan_alloc set=Default

Using the web browser interface:

- On the left hand side menu select [DSL](#)
- Then select the Port to alter
- Scroll to the bottom of the page

<input type="button" value="Submit"/>	

- Select the desired channel allocation strategy from the Alloc Channel pull down.
- select and then click "[here](#)" to return

- Save and reboot system to activate the change

13.2 Command Line Interface configurable parameters

These items must be configured using the Command Line interface available either using the serial connection or using a telnet session.

Connect to the Vega and log in.

13.2.1 End to End Call Proceeding

For H.323 to ISDN calls, by default the Vega will send the Call Proceeding message on the H.323 interface as soon as all the dialling information has been received.

It is possible to configure the Vega only to send the Call Proceeding on the H.323 interface once it has received the call proceeding from the outgoing call made on the ISDN interface – i.e. the call proceeding is passed from end to end rather than being generated by the Vega. This mode is useful when the Vega is not the end point in the telephony network, but is an intermediate carrier.

To set the Vega to support end to end call proceeding, at the CLI prompt type:

- Set `_advanced.isdn.end_to_end_call_proceeding=1`

To allow the Vega to generate the call proceeding message set this configuration parameter to 0.

- Save and reboot system to activate the change

13.2.2 User progress tones – towards ISDN interface

For ISDN to H.323 calls, by default if the Vega DSL is configured as TE it will connect media through before or at alerting so that progress tones are passed through from end to end (i.e. for the ISDN caller to hear ringback and other progress tones the audio must be received over the H.323 interface).

If it is required that the Vega generates these progress tones on the TE ISDN interface, then at the CLI prompt type:

- Set `_advanced.isdn.user_progress=1`
- Save and reboot system to activate the change

Notes: 1. If the Vega DSL is configured as NT it will always generate the call progress tones.
E.g. ringback and disconnect tones.
2. Typically `wait_for_connect` and `user_progress` configuration parameters should either both set to 1 or both set to 0.

13.2.3 User progress tones – towards H.323 interface

For H.323 to ISDN calls, by default the Vega will act upon the in-band audio indicator in the alerting message and if present will connect the media path.

If it is required that the Vega should ignore the in-band audio indicator, and so not pass on the inband tone, then at the CLI prompt type:

- Set `_advanced.isdn.alert_with_progress=0`
- Save and reboot system to activate the change

If it is required that the Vega should always cut through the audio whatever the value of the in-band audio indicator, then at the CLI prompt type:

- Set `_advanced.isdn.alert_with_progress=2`
- Save and reboot system to activate the change

Further details on this and other parameters may be found in the Vega Primer.
